ABSTRACT:

PROBLEM TO BE SOLVED: To manage documents from the viewpoint of users and also to easily collect and use the documents by analyzing a new document to judge a storage destination folder and informing user of this folder.

SOLUTION: A storage candidate retrieval part 103 retrieves a folder that is suitable as the storage destination of the document held at a new document holding part 102. The candidates of storage destinations retrieved by the part 103 are held at a storage candidate holding part 104. Then a folder retrieval part 108 retrieves a folder that is held at a document holding part 101 based on the retrieval condition which is held at a retrieval condition holding part 107. The folder labels are displayed in order of holders held at the part 104, so that a user can easily select the storage destinations by looking at the periphery of the display head of the folder labels. The user also can select the folders to search for the documents and can effectively perform the data retrieval processing.
